- Where ;
- $h(x)$ : Forward cost, from the current state to the goal state.
- $g(x)$ : Backward cost ,from the root state or initial state.
- Path cost is low.

The slide also features a grid of 18 participant icons, each with a letter or symbol, and a small profile picture of the presenter in the top right corner.

The image shows a Google Maps interface with a route highlighted in blue on a map of India. The route starts in the southern part of the country and moves northwards.
